Meet community health workers (CHWs) on the frontlines of malaria response in rural Cambodia.
DOING OUR PART TO FIGHT MALARIA.

Through the USAID Global Health Supply Chain Program–Procurement and Supply Management project, supported by the U.S. President’s Malaria Initiative, our teams work around the world to prevent, diagnose, and treat malaria. In Cambodia, we work alongside community health workers to make sure hard-to-reach areas receive services.
One million Cambodians are infected with malaria every year.
In the villages of Phlov Meas and Takrok, Cambodia...
...community health workers like Pich Sopheap and Sreng Khanha are vital for malaria response.
Community health workers go **door-to-door** to ensure that their community is tested and treated.
In their backpacks, CHWs carry rapid diagnostic tests provided by the USAID Global Health and Supply Chain Program – Procurement and Supply Management project.
After a conversation with the patient, CHWs administer malaria tests.
CHWs then provide results in an instant.
In their backpacks, CHWs have **anti-malarials** available to give to patients.
Without the responsiveness and expertise of CHWs, these remote communities wouldn’t have access to life-saving commodities.
IT TAKES COMMUNITY HEALTH WORKERS TO FIGHT MALARIA
