IT TAKES EARLY DIAGNOSIS TO FIGHT MALARIA.

Learn more about the young patients who benefit from early malaria diagnosis and treatment in Malawi.
DOING OUR PART TO FIGHT MALARIA.

Through the USAID Global Health Supply Chain Program–Procurement and Supply Management project, supported by the U.S. President’s Malaria Initiative, our teams work around the world to prevent, diagnose, and treat malaria. In Malawi, we help children escape the burden of untreated malaria.
Malaria is one of the top three causes of death among children under five years old in Malawi.
It’s vital that children have access to testing and treatment. Mwanza District Hospital located near the southern border of Malawi is doing exactly that.
Lab testing room at Mwanza District Hospital
Families are able to receive rapid diagnostic tests (RDTs), artemisinin-based combination therapies (ACTs), and long-lasting insecticidal nets (LLINs).
As one of the most vulnerable groups affected by malaria, it’s critical for children under five to **have access** to these services and commodities.
The **USAID Global Health Supply Chain Program - Procurement and Supply Management** project supplies lifesaving prevention and treatment medicines and LLINs in Malawi.
That’s what allows clinics or hospitals, like Mwanza District Hospital, to test every patient...
...treat every patient...
AND HELP REDUCE THE BURDEN OF MALARIA IN MALAWI.
